DETAILED ACTION

1. Applicant's election with traverse of the Group II invention in Paper received on March 17, 2004 is acknowledged. The traversal is on the ground(s) that there is no serious burden. This is not found persuasive because of reasons given in the previous Office Action.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper received on March 17, 2004.

3. Claims 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

No positive manipulative steps, which define the claimed method, have been recited. Moreover, if the method is based on the operation of the apparatus, the various elements of the apparatus have not been sufficiently structurally connected to one another to form a unitary apparatus structure.

4. Claims 9 and 10 rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Yagi et al (6,698,249) or Fritsche et al (6,321,573).

Both Yagi et al and Fritsche et al disclose VAD method for forming a silica soot preform. The presently claimed "core partition" in view of the above noted deficiencies

do not patentably define over partition board 8 of Yagi et al or the shield 41, 63 and 73 in Figures 4,5,6 and 7 of Fritsche et al.
